Catching The Exceptions

In [ ]:
```
try:
    print(1 / 0)
except:
    print("something went wrong")
```

In [ ]:
```
try:
    print(1 / 0)
    print("everything is ok")
except ZeroDivisionError:
    print("inf")
print("hello world")
```

In [ ]:
```
try:
    a = []
    # raise ValueError("error")
    a[1]
    print(1 / 0)
except ZeroDivisionError as err:
    print("ZeroDivisionError:", err)
except IndexError as err:
    print("IndexError:", *err.args)
finally:
    print("ok")
```
